

# Environmental Pledge

## City of Terre Haute

---

has voluntarily committed to working with IDEM, local metal finishing companies, and other stakeholders of the National Metal Finishing Strategic Goals Program to assist local metal finishing companies in meeting the Performance Goals outlined in this program.

These environmental performance goals require metal finishers to go above and beyond the regulatory requirements. Achieving these goals will result in improved environmental protection by substantially reducing pollution from metal finishing operations by 2002.

IDEM commends this publicly owned treatment works for its commitment to work cooperatively with the metal finishing industry and to provide the industry with operational flexibility, when possible. Through cooperative efforts such as this, Indiana continues to become a cleaner, healthier place to live.
